The UK1115 Mini Camera is a compact CMOS camera designed for industrial and scientific image processing tasks. The camera is part of the EHD CMOS camera family with different features for various applications. Typical fields of application for the Wide-VGA camera is high resolution measurement, microscopy, documentation and surveillance. The global shutter allows to capture images of fast moving objects. The camera is available as color and monochrome version. The small body allows assembly flexibility in cases with little space in machines or facilities.

Optional opto-decoupled input and output ports permit camera operation even under harsh environmental conditions.

If necessary the camera itself can trigger flash lights.

The fast USB2.0 interface allows the transmission of a maximum of 60 noncompressed live images per second at full sensor resolution. Thus the user has the possibility to implement image processing applications without using an additional frame grabber. The sensor provides higher frame rates depending on the resolution. With the integrated high performance DSP developers may realize image processing or image pre-processing tasks directly in the camera. Thus the camera can be used as a stand-alone intelligent optical sensor.

The built-in memory is able to save up to 32 images and provides the possibility to decouple image capturing and transmission.
